

# ULB-364 SERIES UNDERWATER LOCATION BEACONS

The ULB-364 Series Underwater Location Beacon is a cost-effective acoustic relocation pinger designed for rigorous offshore use. Using off-the-shelf 9V alkaline or lithium batteries, the ULB-364 is ideal for marking underwater sites or equipment where cost is a factor.

Flexibility is a key factor in the design of the ULB-364 series beacons. The ULB-364 can be ordered to meet unique needs with options for different frequencies, acoustic outputs and different activation methods.

The ULB-364EL Extended Life Beacon is the right choice when deployment lengths are longer than 5 months. A longer housing which holds four additional 9 volt batteries extends the operational life of the ULB-364EL to 11.5 months.
